7800

Clinical: 42 years old. Metastatic thymic carcinoma. On chemotherapy with good response. Palpable lump behind the right nipple. Ultrasound for assessment.

ULTRASOUND BREASTS

Comparison made to the recent CT dated 29 May 2025.

Right retroareolar breast tissue, imaging suggestive of gynecomastia.

No suspicious lesions. No significant breast tissue on the left. No axillary adenopathy.

COMMENT

Imaging suggestive of unilateral right-sided gynecomastia. Clinical follow-up recommended.
